(Food Preference Screen – Without Images)

1. Design Style

- Uses a very basic and box-shaped layout.
- No images or illustrations are included to support the content.
- The interface looks plain and less attractive to users.

2. Content Presentation

- Displays only text options such as Breakfast, Lunch, Dinner, and Snacks.
- Lacks visual elements to help users quickly understand food categories.
- The screen does not create interest or engagement.

3. User Experience

- Users need to read text carefully to make selections.
- No visual guidance or emotional appeal is provided.
- The design feels static and monotonous.

4. Overall Impact

- The interface is functional but not appealing.
- It fails to attract users or improve usability through visuals.
- Suitable only for basic functionality, not for modern applications.

GOOD DESIGN

1. Design Style

- Uses a modern and visually rich layout.
- Includes food images and a chef illustration to enhance appearance.
- Rounded buttons and soft colors improve aesthetics.

2. Content Presentation

- Each food category is supported with relevant images or icons.
- Visual elements help users instantly recognize options.
- The design feels friendly, interactive, and professional.

3. User Experience

- Images reduce reading effort and improve understanding.
- The interface creates a positive emotional connection.
- Users can make faster and more confident selections.

4. Overall Impact

- The design is attractive, engaging, and user-friendly.
- Improves usability and visual communication.
- Suitable for real-world food ordering or canteen applications.

KEY DIFFERENCES

1. **Visual Appeal**
   The bad design looks plain and unattractive because it does not use images, whereas the good design looks attractive and appealing due to the use of images and illustrations.
2. **User Engagement**
   The bad design does not grab the user's attention, while the good design keeps users engaged through visual elements.
3. **Content Understanding**
   In the bad design, users must read all text to understand options, whereas in the good design, images help users understand food categories quickly.
4. **User Experience**
   The bad design provides a dull and basic experience, while the good design offers a smooth, friendly, and interactive experience.
5. **Usability**
   The bad design makes decision-making slower, whereas the good design allows faster and easier selection of options.
