EXPERIMENT NO : 6

NAME : SABARIPRABU.M ROLL NO : 240701446

RAD (Rapid Application Development) is a software development methodology that emphasizes quick development and iteration of prototypes over strict planning and long development cycles. It’s ideal for projects where requirements evolve through user feedback and where fast delivery is important.

Key Characteristics of RAD:

• Focus on prototypes instead of extensive documentation

• User involvement throughout the development process

• Fast development cycles with frequent iterations

• Reusable components to reduce effort

• Best suited for UI/UX-intensive projects like web and mobile apps

Phase 1: Requirements Planning

This initial phase defines the project scope and identifies the core needs of the shoe store application through stakeholder collaboration.

1) Key Features Identified

- **Navigation**: Search bar for specific footwear, Cart access (displaying item count), and Category filtering (Sports, Casuals, Formals).
- **User Actions**: Searching for shoes, filtering by category, viewing featured products, managing the cart, and placing orders.

2) Requirements List

1. **User Authentication**: Secure Login and Sign-up interface with social media integration (Facebook, Google).

2. **Product Discovery**: Home page featuring promotional banners (e.g., "50% OFF SNEAKERS") and category-based browsing.

3. **Detailed Product View**: Selection of size, color, and quantity with "In Stock" status.

4. **Cart Management**: View added items, adjust quantities, and remove products before checkout.

5. **Secure Checkout**: Reviewing price details (MRP, Shipping, Discounts) and selecting payment methods.

Phase 2: User Design

During this phase, the visual structure was developed in Axure RP to simulate application behavior before development.

1) Wireframe Architecture

- **Home Page**: Contains a search bar, cart icon, category buttons (Sports, Casuals, Formals), and a "Featured Products" grid.
- **Login/Signup**: A clean interface for email and password entry with options for "Forgot Password" and social logins.
- **Product Listings**: Displays shoes with price (MRP), "New" badges, and quick-add buttons.
- **Product Details**: High-resolution product images with interactive elements for size selection (e.g., sizes 7–12) and color swatches.
- **Cart/Checkout Modal**: A summary view showing selected styles (e.g., HOTSHOT - PYKE), colors, and individual prices.

2) Design Components

- **Reusable Headers**: Consistent search and cart navigation bar across all screens.
- **Interactive Buttons**: Used specific color coding (e.g., Green for "Login/Place Order," Brown for "Checkout/Shop Now") to guide user hierarchy.

Phase 3: Construction

Actual development of the interactive prototype, focusing on functional paths and real-time feedback.

1) Functional Paths & Transitions

- **Navigation Flow**: Home → Category Selection → Product Listing → Product Detail.
- **Dynamic Actions**:
    - **Add to Cart**: Clicking "Add to Cart" updates the cart count and prepares the item for checkout.
    - **Checkout Sequence**: Moving from the cart summary to the final "Place Order" screen.

2) Testing & Refinement

- **Flow Validation**: Simulated transitions between screens to ensure the path from landing page to order placement is seamless.
- **Visual Hierarchy**: Adjusted the layout of the "Price Details" section to clearly highlight the "Grand Total" and "Place Order" CTA.

Phase 4: Cutover

The final stage prepares the design for hand-off and ensures the system is ready for live implementation.

1) Finalization & Export

- **Developer Hand-off**: The interactive Axure prototype is finalized and shared for development.
- **Documentation**: Detailed notes on button behaviors (e.g., "Place Order" triggers the payment gateway) are provided.

2) User Support

- **Stakeholder Walkthrough**: A final demonstration of the end-to-end purchasing flow—from searching for a shoe to the final order confirmation.
